

**BLEND WOOD  
SEALER**

Superior Blend Wood Sealer is not a stain. Stains use a mineral spirit carrier and an iron oxide pigment, therefore, it is not environmentally friendly and does not penetrate the wood very deeply. Our sealer uses a trans oxide pigment which prevents ultraviolet damage and graying of the wood. The trans oxide pigment is carried by a 100% paraffin based oil. Paraffin based oil is a clean oil used in soaps, suntan lotions, saddle soap, and in the hydraulics in food processing plants. The fungicides and algacides in our sealer prevent mold and mildew growth. Our product is much safer, lasts longer and penetrates the wood better. Superior Blend Wood Sealer will prevent lumber from cupping, warping and splitting.

Our sealer can be applied with a brush or roller, sprayed with an airless paint sprayer, pump-up sprayer or a commercial spray rig. It can also be used to pre-dip lumber before installation. We recommend re-application every 3-5 years.

# Superior

Superior Blend Wood Sealer is a commercial grade, penetrating oil base sealer with fungicides, algacides and ultraviolet inhibitors with a cell structure following resin that will protect lumber from cupping, warping and splitting.

Our product is the closest thing to mother nature to replenish the natural oils and saps from the tree. One application will triple the life of your wood structures, and when applied every 3-5 years will last as long as the brick on a home.
